
Marine Engines and Accessories

PRESSURE

AP 00258

PRODUCT

140 PC-200PC

APPLICATION

There are three types of marine engines -- outboard, inboard, and inboard/outboard (stern drive). 140 PC pressure transducers are used in high performance stern drive engines to monitor the amount of air going into the carburetor. The 140 PC can be used in all three types of engines, as well as be used for oil and water pressure monitoring.

Pressure transducers can also be used in speedometers. The range is 0-65 miles per hour (43.3 knots), and 200 PC series traducers are recommended.
