

PRODUCT

163 PC01D36 pressure transducer

APPLICATION DESCRIPTION

The sensor is used as a device for checking the quality of the cloth which is used for drying and guiding paper. When stopping the machine for one reason or another, a small tube is put against the cloth. Then air is passed through the cloth. By applying a constant pressure and monitoring the amount of air passing through the cloth one knows when to change or repair the cloth. The pressure is measured by the 163 PC01D36.
